In C++ there is a variety of methods that can make-up routines or static methods and class. Here is a sample: `class MyClass { public: static int myMethod() { return 10; } };` Main is not a good option since you cannot transfer classes or functions to another compiler. In Visual Studio you can use the ClassWizard (reference) or just the Generate Class button. MyClass.h will generate an MyClass.h and.cpp source file. MyClass.cpp will generate an MyClass.cpp and MyClass.h. If you want to use pre-compiled headers, you can also generate a myclass.h and myclass.cpp with Generate Pre-Compiled Header. This way you can compile the code in Visual Studio for Debug/Release, and any new code added by you can be compiled without extra work. THROBBING GRASSBIRD Andrew Brown joins us for a super short episode. We talk all about the latest White Sox game, we talk about the latest from Eddie, Greg and Andrew. So much ground has been covered in the last 10 days. We also get into some individual game questions like; can the bullpen handle September? Can Wilkin Ramirez be the guy this team needs him to be? Who is the Sox ace? So much great stuff this week. Go to our main site www.theSoxcast.com to leave us a comment or call us at 773-873-SOX. And we'll be back on Friday with the rest of the Sox show. Join us for a 82157476af
